DETERMINING TABLE VALUES FOR HARDWOOD/BEECHWOOD LVL/WOOD-WOOD

Boundary parameters

The tabulated values for load capacity were calculated pursuant to ETA-11/0190 and DIN EN 1995-1-1 for wood-wood and steel-wood connections with Würth ASSY screws in pre-drilled holes for wood with a characteristic density of $\rho_k = 680 \text{ kg/m}^3$. The characteristic values for load capacity and rated values for $k_{\text{mod}} = 0,8$.

Wood-wood / Steel-wood connections

The load capacity figures indicated correspond to the maximum load capacity that can be achieved with a screw of a specific diameter.⁽¹⁾ The required minimum screw length associated with each load capacity is indicated. The indicated load capacity for the respective wood density can be achieved using this or a longer screw length.

In all cases, the indicated load capacities also apply to screw lengths that are longer than the minimum screw length indicated l_{min} . For component thicknesses that are smaller than those listed in the table, the load capacity for a joint may be determined by a specific load capacity calculation.

⁽¹⁾ In the case of screw connections that run parallel to the grain, the screw length used for purposes of calculating the table values was limited as appropriate.

Rated valued for load capacity

For modification factors $k_{\text{mod}} \neq 0,8$, the rated value for load capacity may be calculated based on the indicated characteristic load capacity:

$$F_{i,Rd} = F_{i,Rk} \times k_{\text{mod}} / \gamma_M$$

To be on the safe side, the tabulated rated value for load capacity for may be used for all $k_{\text{mod}} \geq 0,8$.

Verification of screw load capacity for combined loads

Load capacity is verified pursuant to DIN EN 1995-1-1 (8.28).

$$\left(\frac{F_{ax,Ed}}{F_{ax,Rd}} \right)^2 + \left(\frac{F_{v,Ed}}{F_{v,Rd}} \right)^2 \leq 1$$

Joint using multiple screws

In the case of connections using multiple screws in a row in the direction of the wood grain, the effective number n_{ef} of the screws must be specified for screws in a row running in the direction of the wood grain.

Screws bearing a load in the axial direction (ETA-11/0190 A.1.3.1):

$$n_{\text{ef}} = n^{0,9}$$

$$n_{\text{ef}} = \max \{n^{0,9}; 0,9 * n\}$$

General case

For screws that are arranged diagonally at $30^\circ \leq \alpha \leq 60^\circ$

NOTE: These represent planning aids. The values are to be measured by authorized persons for a specific project.

DETERMINING TABLE VALUES FOR HARDWOOD/BEECHWOOD LVL/WOOD-WOOD

Screws subject to shear stress (DIN EN 1995-1-1 8.3.1.1 (8)):

- $n_{\text{ef}} = n$ if each of the screws arranged in a row parallel to the direction of the grain are shifted by $1 \cdot d$ at a right angle to the direction of the grain
- $n_{\text{ef}} = n^{\text{kef}}$ if the screws arranged in a row parallel to the direction of the grain are not shifted in their arrangement

a_1	$4 \cdot d$	$7 \cdot d$	$10 \cdot d$	$\geq 14 \cdot d$	Intermediate values of a_1 can be interpolated
k_{ef}	0,5	0,7	0,85	1,0	

Minimum screw spacing

The minimum spacing indicated in DIN EN 1995-1-1 Table 8.2 apply in the case of screws bearing a load in a right angle to the screw axis and/or in the axial direction:

$$a_1 \geq (4 + |\cos \alpha|) \times d$$

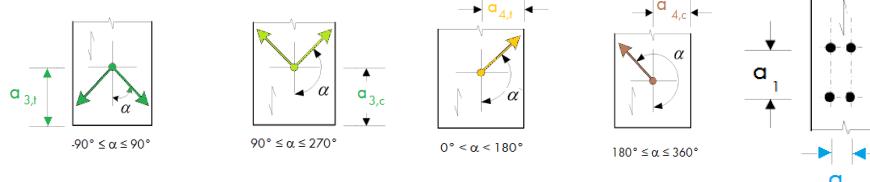

$$a_2 \geq (3 + |\sin \alpha|) \times d$$

$$a_{3,t} \geq (7 + 5 \times \cos \alpha) \times d$$

$$a_{3,c} \geq 7 \times d$$

$$a_{4,t} \geq (3 + 4 \times \sin \alpha) \times d$$

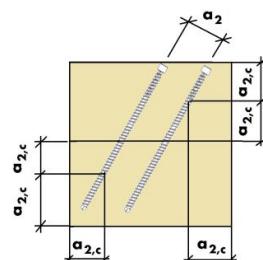

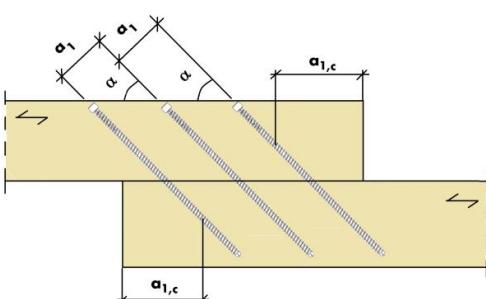

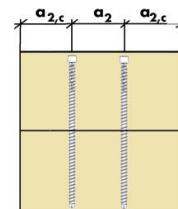

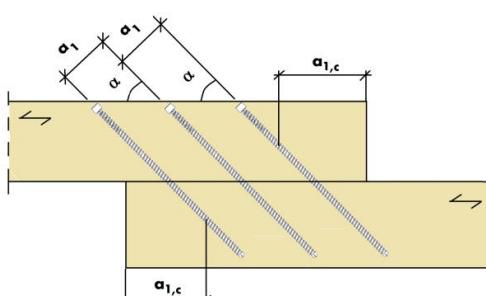

$$a_{4,c} \geq 3 \times d$$

The minimum spacing a_1 and a_2 may be multiplied with the factor 0.7 in the case of sheet steel-wood connections.

In the case of screws that exclusively bear a load on the axial direction, the minimum spacing indicated in ETA-11/0190 apply based on the centre of gravity of the screw in the component:

$$\begin{aligned} a_1 &= 5 \cdot d \\ a_2 &= 2,5 \cdot d \\ a_{1,c} &= 5 \cdot d \\ a_{2,c} &= 3 \cdot d \\ a_1 \times a_2 &= 25 \cdot d^2 \end{aligned}$$

NOTE: These represent planning aids. The values are to be measured by authorized persons for a specific project.

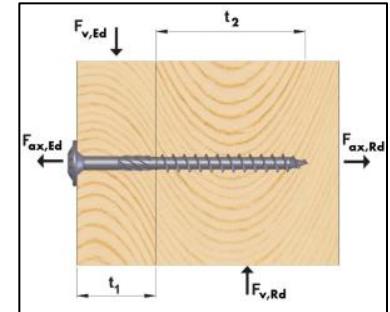

DETERMINING TABLE VALUES FOR HARDWOOD/BEECHWOOD LVL/WOOD-WOOD

Example of a screw load capacity calculation

Wood-wood connection with Würth ASSY 3.0 SK 8x180 mm screws. The angle between the screw axis and the direction of the grain is 90° for both components ($\alpha_1 = 0^\circ$, $\alpha_2 = 0^\circ$) and the density of the face-end component is $t_1 = 120$ mm. A $k_{mod} = 0,8$ (NKL 1 and KLED "mean") is estimated for the rated load capacity value.

Component 1	Thickness = 120 mm
Wood	$\rho_{k,1} = 680 \text{ kg/m}^3$
Pre-drilled	$\alpha_1 = 90^\circ$
	$t_1 = 120 \text{ mm}$

Component 2	Thickness = 320 mm
Wood	$\rho_{k,2} = 680 \text{ kg/m}^3$
Pre-drilled	$\alpha_2 = 90^\circ$
	$t_2 = 60 \text{ mm}$

Würth ASSY 3.0 SK partial thread Ø8x180mm

d	= 8 mm	"Screw diameter"
l_g	= 80 mm	"Thread length"
d_h	= 22 mm	"Head diameter"
$M_{y,Rk}$	= 20000 Nmm	"Characteristic yield moment [Annex 1 Table 1.1]"

f_{tens}	= 20 kN	"Characteristic tensile load capacity [Annex 1 Table 1.1]"

Data per ETA-11/0190 and corresponding product information

Screw head pull-through capacity

$$f_{head,k} = n_{ef} \cdot f_{head,k} \cdot d_h^2 \cdot (\rho_k / 350)^{0,8} \quad \text{"DIN EN 1995-1-1 (8.40b)"}$$

$$1,0 \cdot 10 \cdot 22^2 \cdot (590 / 350)^{0,8}$$

$$7,35 \text{ kN}$$

$$n_{ef} = 1,0 \quad \text{"Effective number of screws [A.1.3.1]"}$$

$$\rho_k = \min \{\rho_{1,k}; 590\} \quad \text{"The characteristic density is limited to } 590 \text{ kg/m}^3 \text{ (axial load)"}$$

$$\min \{680; 590\} = 590 \text{ kg/m}^3 \quad \text{[A.1.3.2]"}$$

Load capacity of a screw when being pulled out

$$F_{ax,\alpha,Rk} = n_{ef} \times k_{ax} \times f_{ax,k} \times d \times l_{ef} \times (\rho_k/350)^{0,8} \quad \text{"[A1.3.1 (1.5)]"}$$

$$1,0 \times 1,0 \times 11 \times 8 \times 60 \times (590 / 350)^{0,8}$$

$$8,02 \text{ kN}$$

$$k_{ax} = 1,0$$

$$\rho_k = \min \{\rho_{2,k}; 590\} \quad \text{"The characteristic density is limited to } 590 \text{ kg/m}^3 \text{ [A.1.3.2]"}$$

$$\min \{680; 590\} = 590 \text{ kg/m}^3$$

$$l_{ef} = \min \{l_g; t_2\} \quad \text{"Anchorage length of the threads in component 2"}$$

$$\min \{80; 60\} = 60 \text{ mm}$$

NOTE: These represent planning aids. The values are to be measured by authorized persons for a specific project.

DETERMINING TABLE VALUES FOR HARDWOOD/BEECHWOOD LVL/WOOD-WOOD

Screw tensile load capacity

$$F_{tens,Rk} = n_{ef} \cdot f_{tens,k}$$

$$1,0 \cdot 20$$

$$20 \text{ kN}$$

"DIN EN 1995-1-1 (8.40c)"

Screw axial load capacity

$$F_{ax,Rk} = \min \{F_{head,Rk}; F_{ax,a,Rk}, F_{tens,Rk}\}$$

$$\min \{7,35; 8,02; 20\}$$

$$F_{ax,Rd} = \min \{F_{head,Rk} \times k_{mod} / \gamma_M; F_{ax,a,Rk} \cdot k_{mod} / \gamma_M, F_{tens,Rk} / \gamma_M\}$$

$$\min \{7,35 \times 0,8 / 1,3; 8,02 \cdot 0,8 / 1,3; 20 / 1,3\} = 4,52 \text{ kN}$$

$$k_{mod} = 0,8$$

"DIN EN 1995-1-1 3.1.3"

$$\gamma_M = 1,3$$

"DIN EN 1995-1-1 2.4.1"

Embedment strengths

$$f_{h,1,k} = \frac{0,082 \cdot \rho_k \cdot (1 - 0,01 \cdot d)}{2,5 \cdot \cos^2 \alpha + \sin^2 \alpha}$$

"Embedment strength in component 1, [A.1.2.2 (1.2)]"

$$= \frac{0,082 \cdot 680 \cdot (1 - 0,01 \cdot 8)}{2,5 \cdot \cos^2 90^\circ + \sin^2 90^\circ}$$

$$= 51,3 \text{ N/mm}^2$$

$$\alpha = 90^\circ$$

"Angle between screw axis and direction of the grain"

$$f_{h,2,k} = f_{h,1,k} = 51,3 \text{ N/mm}^2$$

"Embedment strength in component 2, [A.1.2.2 (1.2)]"

$$\beta = f_{h,2,k} / f_{h,1,k} = 1,0$$

"DIN EN 1995-1-1 (8.8)"

Screw load capacity for shear stress

Equations 8.6 a to f per DIN EN 1995-1-1

$$F_{v,1,Rk} = f_{h,1,k} \times t_1 \times d = 49,3 \text{ kN} \quad (a)$$

$$F_{v,2,Rk} = f_{h,2,k} \times t_2 \times d = 24,6 \text{ kN} \quad (b)$$

$$F_{v,3,Rk} = \frac{f_{h,1,k} \cdot t_1 \cdot d}{1+\beta} \left[\sqrt{\beta + 2 \cdot \beta^2 \cdot \left[1 + \frac{t_2}{t_1} + \left(\frac{t_2}{t_1} \right)^2 \right] + \beta^3 \cdot \left(\frac{t_2}{t_1} \right)^2} - \beta \cdot \left(1 + \frac{t_2}{t_1} \right) \right] + \frac{F_{ax,Rk}}{4} = 18,6 \text{ kN} \quad (c)$$

$$F_{v,4,Rk} = 1,05 \cdot \frac{f_{h,1,k} \cdot t_1 \cdot d}{2+\beta} \left[\sqrt{2 \cdot \beta \cdot (1+\beta) + \frac{4 \cdot \beta \cdot (2+\beta) \cdot M_{y,Rk}}{f_{h,1,k} \cdot d \cdot t_1^2}} - \beta \right] + \frac{F_{ax,Rk}}{4} = 19,3 \text{ kN} \quad (d)$$

NOTE: These represent planning aids. The values are to be measured by authorized persons for a specific project.

DETERMINING TABLE VALUES FOR HARDWOOD/BEECHWOOD LVL/WOOD-WOOD

$$F_{v,5,Rk} = 1,05 \cdot \frac{f_{h,1,k} \cdot t_2 \cdot d}{1+2 \cdot \beta} \left[\sqrt{2 \cdot \beta^2 \cdot (1+\beta) + \frac{4 \cdot \beta \cdot (1+2 \cdot \beta) \cdot M_{y,Rk}}{f_{h,1,k} \cdot d \cdot t_2^2}} - \beta \right] + \frac{F_{ax,Rk}}{4} = 10,8 \text{ kN} \quad (e)$$

$$F_{v,6,Rk} = 1,15 \cdot \sqrt{\frac{2 \cdot \beta}{1 + \beta}} \cdot \sqrt{2 \cdot M_{y,Rk} \cdot f_{h,1,k} \cdot d} + \frac{F_{ax,Rk}}{4} = 6,50 \text{ kN} \quad (f)$$

$$F_{v,Rk} = \min \{F_{v,i,Rk}\} = 6,50 \text{ kN}$$

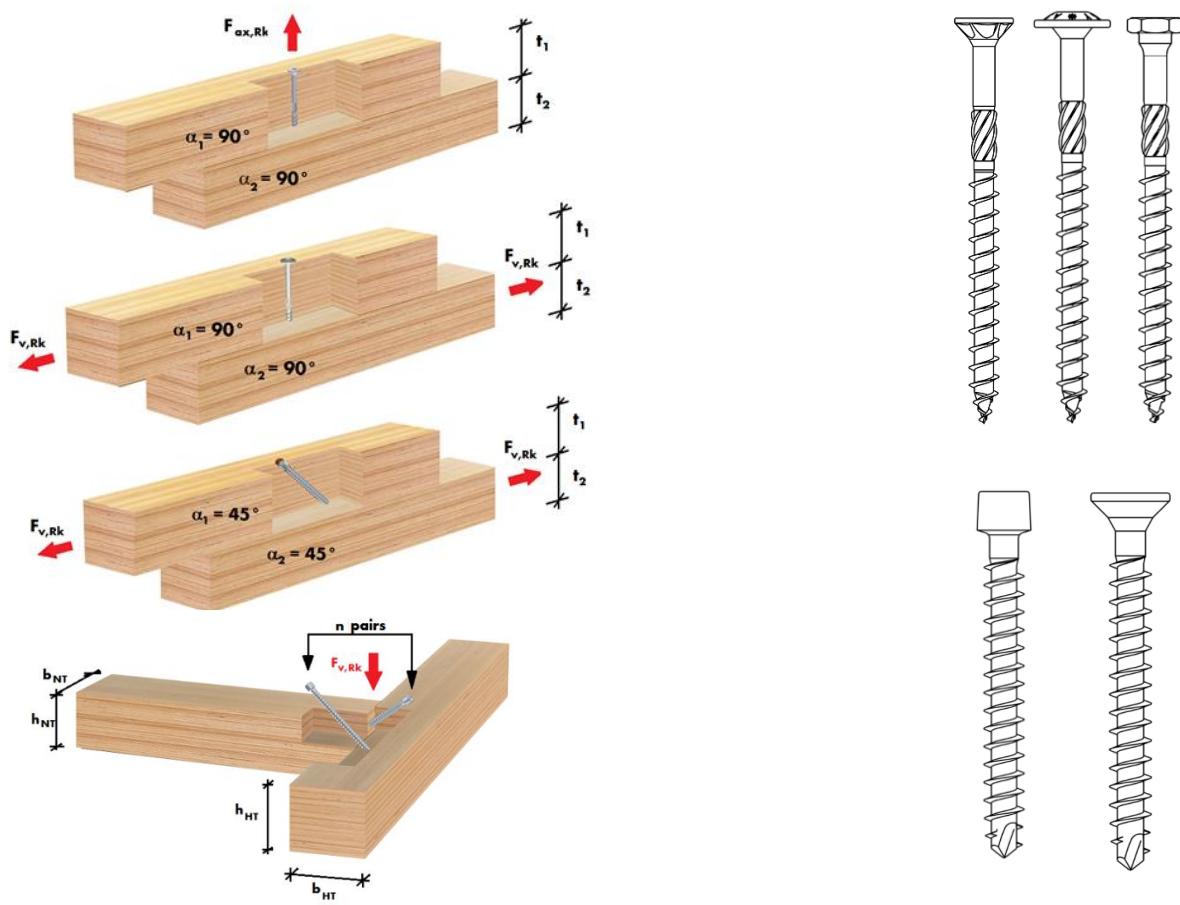

$$F_{v,Rd} = F_{v,Rk} \cdot k_{mod} / \gamma_M = 6,50 \cdot 0,8 / 1,3 = 4,00 \text{ kN}$$

USE FOR HARDWOOD/BEECHWOOD LAMINATED VENEER LUMBER/WOOD-WOOD

Sample calculation wood-wood

System:

Connection purlin to binder

Purlin:

$b/h = 120 \text{ mm} / 240 \text{ mm}$, hardwood, ($\rho_k = 680 \text{ kg/m}^3$)

Binder:

$b/h = 160 \text{ mm} / 400 \text{ mm}$, hardwood, ($\rho_k = 680 \text{ kg/m}^3$)

Calculation base:

Measurement: EC5 or DIN EN 1995-1-1:2010-12 and national German application document DIN 20000-6:2012-06; ETA 11/0190 ASSY wood screws.

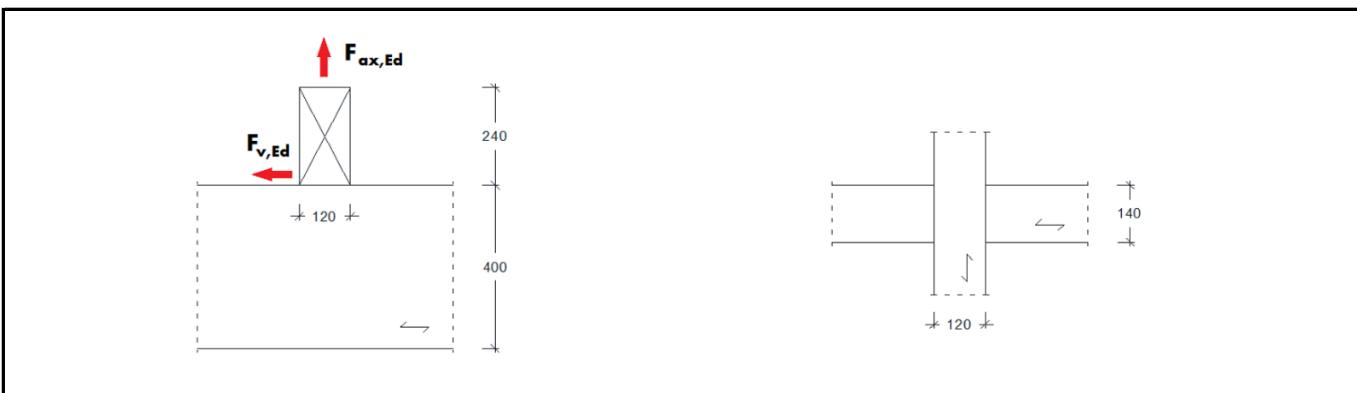

Anchor force:

$F_{v,Ed} = 3,2 \text{ kN}$ (NKL = 1, KLED = „mean“)

$F_{ax,Ed} = 6,8 \text{ kN}$ (NKL = 1, KLED = „mean“)

Prerequisite:

Screw head flush with the top of the purlin: $t_1 = 240 \text{ mm}$

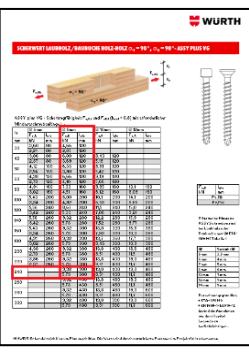

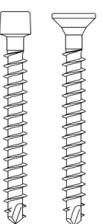

Alternative 1 - ASSY plus VG Ø 8 mm

$$F_{v,Ed} = 5,73 \text{ kN} \Rightarrow \text{Table}$$

Shear capacity hardwood/Beechwood laminated veneer lumber wood-wood $\alpha_1 = 90^\circ$, $\alpha_2 = 90^\circ$ - ASSY plus VG

...	7,78	260	13,4	300	15,2	300	18,2	300
							$F_{v,Rk}$ kN	I_{min} mm
							$F_{v,Rd}$	

Selected: ASSY plus VG cylinder head 8x240 mm

$F_{v,Rd} = 6,58 \text{ kN}$ (NKL = 1, KLED = „mean“)

NOTE: These represent planning aids. The values are to be measured by authorized persons for a specific project.

USE OF HARDWOOD/BEECHWOOD LVL/WOOD-WOOD SHEAR CONNECTION

Friction between the wood components may be estimated if pressure on the wood components is not impeded. ($\mu = 0,25$)

Required number of screws per side lumber piece for $n_{ef} = n$:

$$\text{erf. } n = F_{Ed} / (2 \times (1 + \mu) \times F_{v,Rd}) = 640 / (2 \times 1,25 \times 6,58) = 38,9$$

Minimum spacing

per ETA-11/0190 A.1.4.2:

$$a_1 \geq 5 \times d = 40 \text{ mm}$$

selected 70 mm

$$a_2 \geq 2,5 \times d = 20 \text{ mm}$$

selected 28 mm

$$a_1 \times a_2 \geq 25 \times d^2$$

$$a_{1,c} \geq 5 \times d = 40 \text{ mm}$$

$$a_{2,c} \geq 3 \times d = 24 \text{ mm}$$

selected 34 mm

Maximum number of screws at a right angle to the direction of the grain:

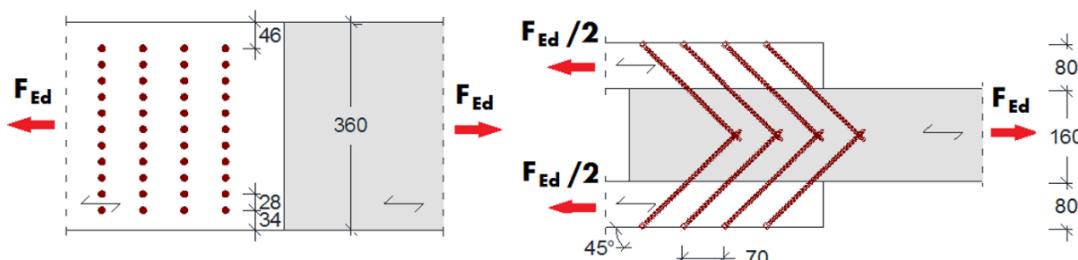

$$h_{90} = 1 + (h - 2 \times a_{2,c} - 1,5 \times d) / a_2 = 1 + (360 - 2 \times 34 - 1,5 \times 8) / 28 = 11$$

Number of screws in the direction of the grain in a row:

$$\text{erf. } n_0 = \text{erf. } n / n_{90} = 38,9 / 11 = 3,54$$

$$n_0 = 4$$

$$n_{0,ef} = \max\{n_0^{0,9}; 0,9 \times n_0\} = \max\{4^{0,9}; 0,9 \times 4\} = 3,6$$

Verification of load capacity:

$$\frac{F_{v,Ed}}{n_{ef} \cdot F_{v,Rd}} = \frac{640}{2 \cdot 11 \cdot 3,6 \cdot 1,25 \cdot 6,58} = 0,98 \leq 1$$

Additional verification:

Shear capacity of the wood in the net cross section.

NOTE: These represent planning aids. The values are to be measured by authorized persons for a specific project.

USE FOR HARDWOOD/BEECHWOOD LAMINATED VENEER LUMBER/WOOD-WOOD

Sample calculation wood-wood; cross-cut wood connection

System:

Post-bar connection

Posts:

$b/h = 160 \text{ mm} / 160 \text{ mm}$, hardwood, ($\rho_k = 680 \text{ kg/m}^3$)

Bar:

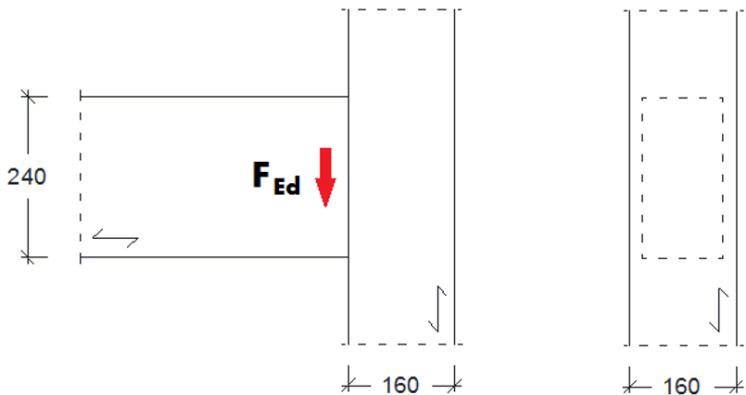

$b/h = 120 \text{ mm} / 240 \text{ mm}$, hardwood, ($\rho_k = 680 \text{ kg/m}^3$)

Calculation base:

Measurement: EC5 or DIN EN 1995-1-1:2010-12 and national German application document DIN 20000-6:2012-06; ETA 11/0190 ASSY wood screws.

Anchor force:

$F_{Ed} = 20 \text{ kN}$ (NKL = 1, KLED = „mean“)

Alternative - ASSY 3.0 SK

Shear capacity hardwood/Beechwood laminated veneer lumber wood-wood $\alpha_1 = 90^\circ$, $\alpha_2 = 0^\circ$ - ASSY 3.0 SK

USE FOR HARDWOOD/BEECHWOOD LAMINATED VENEER LUMBER/WOOD-WOOD

Minimum spacing

per DIN EN 1995-1-1:

Posts

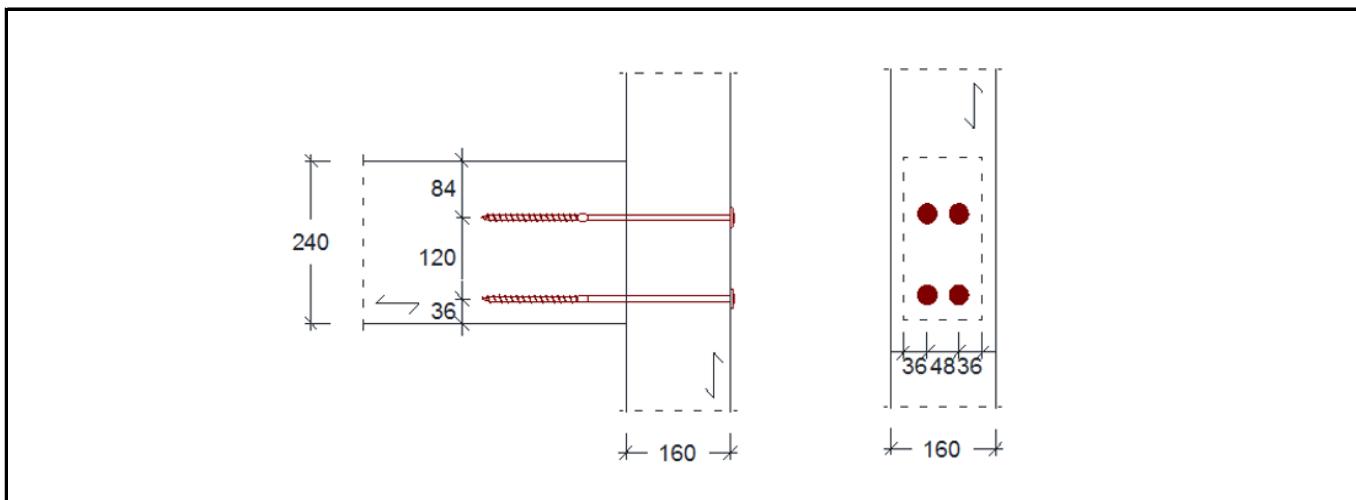

$$\begin{aligned} a_1 &\geq (4 + |\cos 0^\circ|) \times d = (4 + |\cos 0^\circ|) \times 12 & = 40 \text{ mm} \\ a_2 &\geq (3 + |\sin 0^\circ|) \times d = (3 + |\sin 0^\circ|) \times 12 & = 36 \text{ mm} \\ a_{4,c} &\geq 3 \times d = 3 \times 12 & = 36 \text{ mm} \end{aligned}$$

Support

$$\begin{aligned} a_2 &\geq (3 + |\sin 90^\circ|) \times d = (3 + |\sin 90^\circ|) \times 12 & = 48 \text{ mm} \\ a_{3,c} &\geq 7 \times d = 7 \times 12 & = 84 \text{ mm} \\ a_{4,t} &\geq (3 + 4 \times \sin 90^\circ) \times d = (3 + 4 \times \sin 90^\circ) \times 12 & = 84 \text{ mm} \\ a_{4,c} &\geq 3 \times d = 3 \times 12 & = 36 \text{ mm} \end{aligned}$$

Effective number of screws:

$$\begin{aligned} a_1 &= 10 \times d \rightarrow k_{\text{ef}} & = 0,85 \\ n_{0,\text{ef}} &= n_0^{\text{k}_{\text{ef}}} = 2^{0,85} & = 1,80 \\ n_{\text{ef}} &= n_{90} \times n_{0,\text{ef}} = 2 \times 1,80 & = 3,60 \end{aligned}$$

Verification of load capacity:

$$\frac{F_{Ed}}{n_{\text{ef}} \cdot F_{v,Rd}} = \frac{20}{3,60 \cdot 5,64} = 0,99 \leq 1$$

Verification of the transverse connection is satisfied whilst $h_1 / h > 0,7$.

NOTE: These represent planning aids. The values are to be measured by authorized persons for a specific project.

KEY TABLES BEECHWOOD LAMINATED VENEER LUMBER/WOOD-WOOD CONNECTIONS

Key

$F_{ax,Rk}$ Characteristic load capacity in [kN] for a screw when being withdrawn at an angle between the veneer layers and screw axis of 0° or 90° .

$F_{ax,Rd}$ Pull: Rated value for load capacity in [kN] for a screw when being withdrawn for an angle between the veneer layers and screw axis of 0° or 90° with $k_{mod} = 0,8$ and $\gamma_M = 1,3$ dependent upon the thread reach.

Press: $\min \{k_{mod} / \gamma_M \times F_{ax,Rk}; k_c \times N_{pl,d}\}$

$k_c \times N_{pl,d}$ Rated value per the max. load capacity of a screw under pressure

$F_{v,Rk}$ Characteristic load capacity in [kN] for a screw for shearing at an angle between the veneer layers and screw axis of 0° or 90° . In the case of tensile shear strength, the angle between the screw axis and the shear force is 45° .

$F_{v,Rd}$ Rated value for load capacity in [kN] for a screw for shearing at an angle between the veneer layers and screw axis of 0° or 90° with $k_{mod} = 0,8$ and $\gamma_M = 1,3$. In the case of tensile shear strength, the angle between the screw axis and the shear force is 45° .

F_{tens} Load capacity for tearing out

α_i Angle between screw axis and grain / ply direction of the component's veneers

l Screw length in [mm]

l_{min} Minimum screw length with which the indicated load capacity is achieved in [mm]

l_{ef} Effective anchorage length of the threads in cm; withdrawal capacity ASSY plus VG

d Nominal diameter/Thread outer diameter for screws in [mm]

t_1 Side lumber thickness on the screw head side in [mm]; the minimum component thickness is at least 24 mm (see A1.4 ETA 11/0190)

t_2 Side lumber thickness on the screw tip side component 2 at $\alpha = 0^\circ$ or 90° in [mm]: $t_2 \geq l_{min} - t_1$

Side lumber thickness on the screw tip side component 2 (shear application) $\alpha = 45^\circ$ in [mm]; component 2: $t_2 \geq l_{min} / 1,414 - t_1$

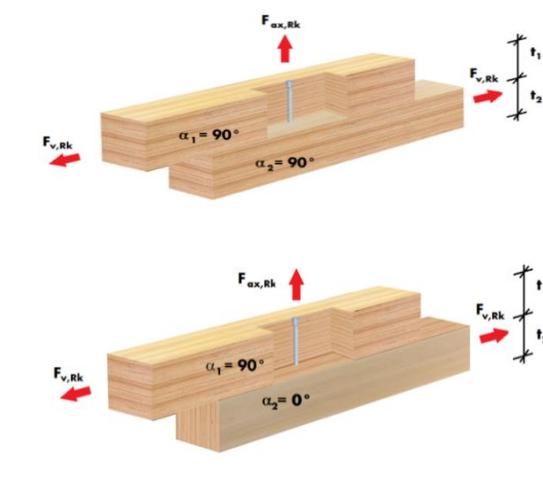

m Installation dimensions

b_{NT} Minimum width of the side bar

h_{NT} Minimum height of the side bar

b_{HT} Minimum width of the main bar

h_{HT} Minimum height of the main bar

KEY TABLES BEECHWOOD LAMINATED VENEER LUMBER/WOOD-WOOD CONNECTIONS

General information

- Single shear wood-wood connection with screws in pre-drilled holes. Calculated values apply to Beechwood laminated veneer lumber that conforms to product-specific AbZ Z.9.1-837. All screws must be installed flush.
 - Pre-drilled hole diameter per ETA-11/0190
- | Thread outer diameter in mm | 5 | 6 | 7 | 8 | 10 | 12 | 14 |
|-----------------------------|-----|---|---|---|----|----|----|
| Pre-drill diameter in mm | 3,5 | 4 | 5 | 6 | 7 | 8 | 9 |
- Screws made of carbon steel may only be used in use categories 1 and 2. (exception: hot-dip galvanized ASSY plus VG Ø14)
 - Individual load capacity for a screw with a characteristic density of $\rho_k \geq 680 \text{ kg/m}^3$. The characteristic density was limited to $\rho_k \geq 590 \text{ kg/m}^3$ for axial loads. In the case of connections using multiple screws, the effective number of screws n_{eff} per DIN EN 1995-1-1 (8.17) and/or ETA-11/0190 A.1.3.1 must be adhered to.
 - Load-bearing connections must comprise at least two screws. Deviations from this are possible per DIN EN 1995-1-1/NA:2010-12, NCI to 8.3.1.2 (NA.10) and ETA-11/0190, 4.2.
 - ASSY 3.0 Combi with U-washer per EN ISO 7094 or DIN 1052: Characteristic transverse compressive capacity of the wood at least $8,5 \text{ N/mm}^2$
 - Shear application: The value for shear capacity F_v can be multiplied by 1.25 if friction between the two components is taken into account.
 - Main / side bar connection: Main bar and side bar top edge must be positioned flush. The main bar must be torsion-resistant. Additional moments based on eccentricity of the connection as well as cross-section weaknesses resulting from connectors must be taken into consideration in the verification of the components. The minimum spacing for the screws per ETA-11/0190 must be complied with. $a_{2,c} = 3 \times d; s = 1,5 \times d$

	5,70	120	7,88	120	10,51	120
...	
	9,26	120	13,57	140	17,09	120

Selected: ASSY 3.0 Combi 10 x 120 mm

$F_{v,Rd} = 7,88 \text{ kN}$ (NKL = 1, KLED = „mean“)

NOTE: These represent planning aids. The values are to be measured by authorized persons for a specific project.

USES FOR HARDWOOD/BEECHWOOD LAMINATED VENEER LUMBER/STEEL-WOOD SHEAR CONNECTION

The arrangement of the screws is selected such that it is not required to reduce the effective number of screws ($n_{\text{ef}} = n$). Screws placed in a row in the direction of the grain are organised offset by the screw diameter $d = 10 \text{ mm}$ at a right angle to the direction of the grain.

Required number of screws per sheet for $n_{\text{ef}} = n$:

$$\text{erf. } n = 0,5 \times F_{\text{Ed}} / F_{v,\text{Rd}} = 0,5 \times 640 \text{ kN} / 7,88 \text{ kN} = 41$$

Minimum spacing

per ETA-11/0190 A.1.4.2:

$$a_1 \geq 0,7 \times (4 + |\cos 0^\circ|) \times 10 = 35 \text{ mm}$$

$$a_2 \geq 0,7 \times (3 + |\sin 0^\circ|) \times 10 = 21 \text{ mm}$$

$$a_{3,t} \geq (7 + 5 \times \cos 0^\circ) \times 10 = 120 \text{ mm}$$

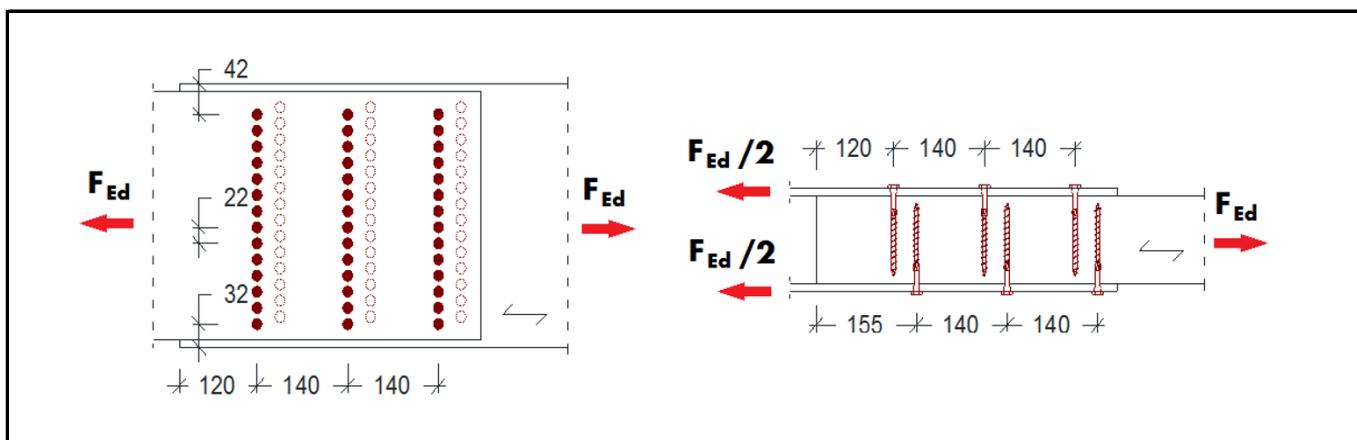

$$a_{4,c} \geq 3 \times 10 = 30 \text{ mm}$$

Maximum number of screws at a right angle to the direction of the grain:

$$h_{90} = (h - 2 \times a_{4,c} + d) / a_2 + 1 = (360 - 2 \times 30 + 10) / 21 + 1 = 14$$

Number of screws in the direction of the grain in a row:

$$n_0 = \text{erf. } n / n_{90} = 41 / 14 = 3$$

Verification of load capacity:

$$\frac{F_{v,Ed}}{n_{\text{ef}} \cdot F_{v,Ed}} = \frac{640}{2 \cdot 3 \cdot 14 \cdot 7,88} = 0,97 \leq 1$$

Additional verification:

Tension load capacity for wood based on net cross section, tensile load capacity of the steel sheet, embedment strength of the steel sheet

NOTE: These represent planning aids. The values are to be measured by authorized persons for a specific project.

USE FOR HARDWOOD/BEECHWOOD LAMINATED VENEER LUMBER/STEEL-WOOD SHEAR CONNECTION

Sample calculation steel-wood; shear connection:

System:

Shear connection (45°) steel to wood

Steel:

$t_1 = 6 \text{ mm}$; S235

Wood:

$b/h = 120 \text{ mm} / 360 \text{ mm}$, hardwood, ($\rho_k = 680 \text{ kg/m}^3$)

Calculation base:

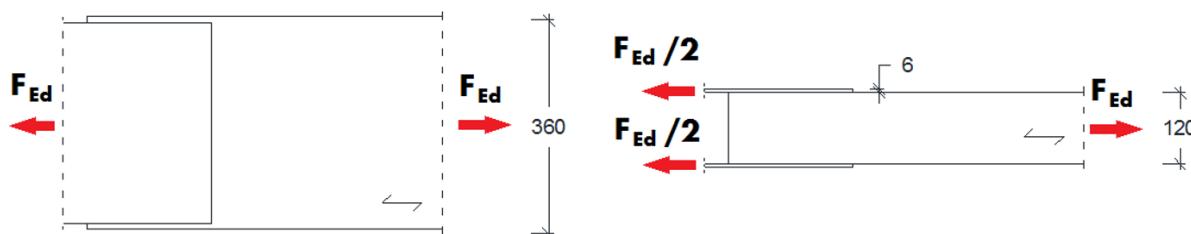

Measurement: EC5 or DIN EN 1995-1-1:2010-12 and national German application document DIN 20000-6:2012-06; ETA 11/0190 ASSY wood screws.

Anchor force:

$F_{Ed} = 640 \text{ kN}$ (NKL = 1, KLED = „mean“)

Objective:

Minimisation of the required number of screws

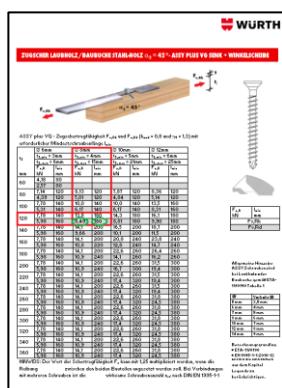

Alternative - ASSY plus VG:

Lap shear hardwood/Beechwood laminated veneer lumber steel-wood $\alpha_2 = 45^\circ$ - ASSY plus VG countersunk head with angle plate

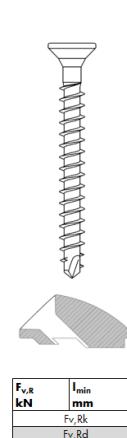

Lumber thickness: $t_2 = 120 \text{ mm}$

LAP SHEAR HARDWOOD/BEECHWOOD LAMINATED VENEER LUMBER STEEL-WOOD $\alpha_2 = 45^\circ$
ASSY PLUS VG COUNTERSUNK + ANGLE PLATE

ASSY plus VG - Lap shear capacity $F_{v,Rk}$ and $F_{v,Rd}$ ($k_{mod} = 0.8$ and $\gamma_M = 1.3$) with required l_a minimum screw length l_{min}

$F_{v,Rk}$ kN	l_{min} mm
$F_{v,Rk}$	
$F_{v,Rd}$	

Selected:

ASSY plus VG countersunk head 8 x 180 mm + angle plate 45°

$$F_{v,Rd} = 8,49 \text{ kN} \quad (\text{NKL} = 1, \text{KLED} = „mean“)$$

NOTE: These represent planning aids. The values are to be measured by authorized persons for a specific project.

USE FOR HARDWOOD/BEECHWOOD LAMINATED VENEER LUMBER/STEEL-WOOD SHEAR CONNECTION

Friction between the steel and wood components may be estimated if pressure on the steel sheets in contact with the wood components is not impeded. ($\mu = 0.25$)

Required number of screws per sheet for $n_{ef} = n$:

$$\text{erf. } n = F_{Ed} / (2 \times (1 + \mu) \times F_{v,Rd}) = 640 / (2 \times 1,25 \times 8,49) = 30,2$$

Minimum spacing

per ETA-11/0190 A.1.4.2:

$$a_1 \geq 5 \times d = 40 \text{ mm}$$

selected 70 mm

$$a_2 \geq 2,5 \times d = 20 \text{ mm}$$

selected 26 mm

$$a_1 \times a_2 \geq 25 \times d^2$$

$$a_{1,c} \geq 5 \times d = 40 \text{ mm}$$

$$a_{2,c} \geq 3 \times d = 24 \text{ mm}$$

selected 31 mm

Maximum number of screws at a right angle to the direction of the grain:

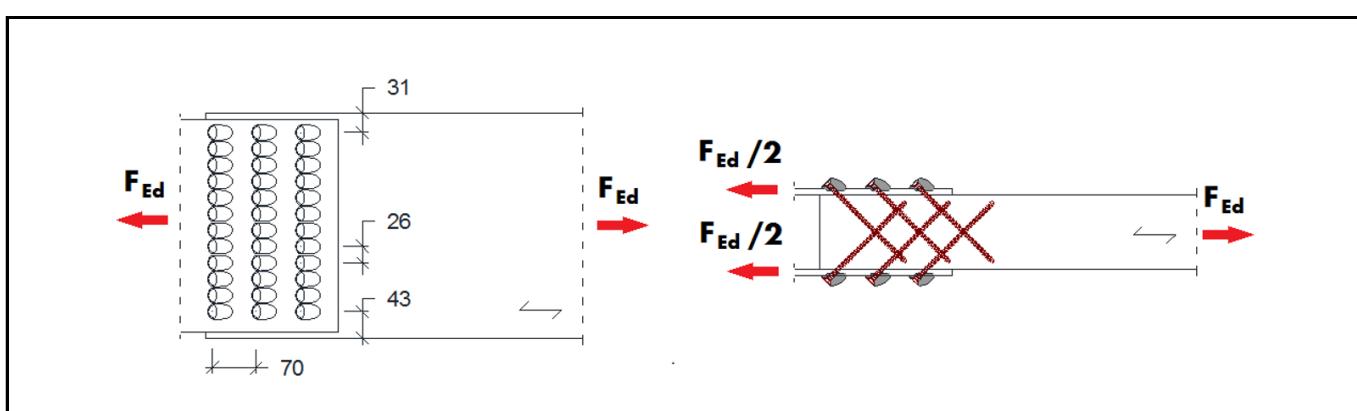

$$h_{90} = 1 + (h - 2 \times a_{2,c} - 1,5 \times d) / a_2 = 1 + (360 - 2 \times 31 - 1,5 \times 8) / 26 = 12$$

Number of screws in the direction of the grain in a row:

$$\text{erf. } n_0 = \text{erf. } n / n_{90} = 30,2 / 12 = 2,52$$

$$n_0 = 3$$

$$n_{0,ef} = \max\{n_0^{0,9}; 0,9 \times n_0\} = \max\{3^{0,9}; 0,9 \times 3\} = 2,7$$

Verification of load capacity:

$$\frac{F_{v,Ed}}{n_{ef} \cdot F_{v,Rd}} = \frac{640}{2 \cdot 12 \cdot 2,7 \cdot 1,25 \cdot 8,49} = 0,93 \leq 1$$

Additional verification:

Tension load capacity for wood based on net cross section, tensile load capacity of the steel sheet, embedment strength of the steel sheet.

NOTE: These represent planning aids. The values are to be measured by authorized persons for a specific project.

KEY TABLES HARDWOOD/BEECHWOOD LAMINATED VENEER LUMBER/STEEL-WOOD CONNECTIONS

Key

$F_{ax,Rk}$ Characteristic load capacity in [kN] for a screw when being withdrawn at an angle between the veneer layers and screw axis of 0° or 90° .

$F_{ax,Rd}$ Pull: Rated value for load capacity in [kN] for a screw when being withdrawn for an angle between the veneer layers and screw axis of 0° or 90° with $k_{mod} = 0,8$ and $\gamma_M = 1,3$ dependent upon the thread reach.

$F_{v,Rk}$ Characteristic load capacity in [kN] for a screw for shearing at an angle between the veneer layers and screw axis of 0° or 90° . In the case of tensile shear strength, the angle between the screw axis and the shear force is 45° .

$F_{v,Rd}$ Rated value for load capacity in [kN] for a screw for shearing at an angle between the veneer layers and screw axis of 0° or 90° with $k_{mod} = 0,8$ and $\gamma_M = 1,3$. In the case of tensile shear strength, the angle between the screw axis and the shear force is 45° .

α_i Angle between screw axis and grain / ply direction of the component's veneers

ℓ Screw length in [mm]

ℓ_{min} Minimum screw length with which the indicated load capacity is achieved in [mm]

ℓ_{ef} Effective anchorage length of the threads in [cm]

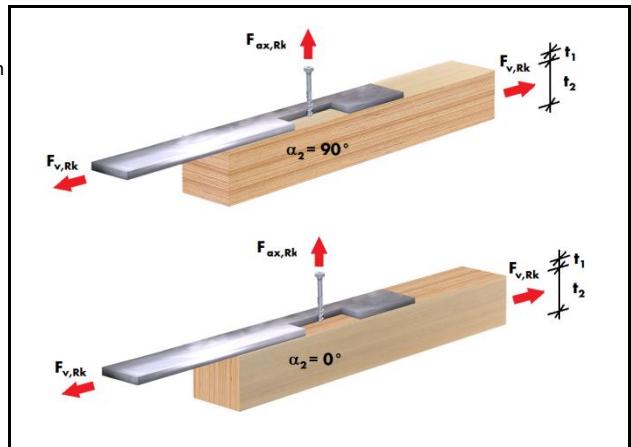

d Nominal diameter/Thread outer diameter for screws in [mm]

t_1 Thickness of the steel component

t_s Thickness of the steel component (minimum and maximum)

t_2 Side lumber thickness on the screw tip side component 2 at $\alpha = 0^\circ$ or 90° in [mm]: $t_2 \geq l_{min} - t_1$

Side lumber thickness on the screw tip side component 2 (shear application) $\alpha = 45^\circ$ in [mm]; component 2: $t_2 \geq l_{min} / 1,414 - t_1$

Explanatory notes to the tables

$\varnothing 6\text{mm}$	
$t_{s,min} = 3\text{mm}$	
$t_{s,max} = 6\text{mm}$	
$F_{v,R}$	l_{min}
kN	mm
7,78	140
5,98	160

Characteristic value $F_{v,Rk}$ and/or $F_{ax,Rk}$ l_{min} for $F_{v,Rk}$ and/or F_{ax}
 Rated value ($k_{mod} = 0,8$) $F_{v,Rd}$ and/or $F_{ax,Rd}$ l_{min} for $F_{v,Rd}$ and/or F_{ax}

Note when using angle plates: The load capacity and minimum screw lengths apply for the maximum sheet thickness. Increase wood thickness may be necessary in the case of reduced sheet thickness.

NOTE: These represent planning aids. The values are to be measured by authorized persons for a specific project.

KEY TABLES HARDWOOD/BEECHWOOD LAMINATED VENEER LUMBER/STEEL-WOOD CONNECTIONS

General information

- Single shear steel-wood connection with or without angle plate and screws in pre-drilled holes. Calculated values apply to Beechwood laminated veneer lumber that conforms to product-specific AbZ Z-9.1-837. All screws must be installed flush.

- Pre-drilled hole diameter per ETA-11/0190

Thread outer diameter in mm	5	6	7	8	10	12	14
Pre-drill diameter in mm	3,5	4	5	6	7	8	9

- Screws made of carbon steel may only be used in use categories 1 and 2. (exception: hot-dip galvanized ASSY plus VG Ø14)
- Individual load capacity for a screw with a characteristic density of $\rho_k \geq 680 \text{ kg/m}^3$. The characteristic density was limited to $\rho_k \geq 590 \text{ kg/m}^3$ for axial loads. In the case of connections using multiple screws, the effective number of screws n_{ef} per DIN EN 1995-1-1 (8.17) and/or ETA-11/0190 A.1.3.1 must be adhered to.
- Load-bearing connections must comprise at least two screws. Deviations from this are possible per DIN EN 1995-1-1/NA:2010-12, NCI to 8.3.1.2 (NA.10) and ETA-11/0190, 4.2.
- Shear application: The value for shear capacity F_v can be multiplied by 1.25 if friction between the two components is taken into account.

General information

ASSY screws are to be pre-drilled for hardwood or Beechwood laminated veneer lumber per ETA-11/0190 Table 1.

\emptyset	Pre-drilling \emptyset
5 mm	3,5 mm
6 mm	4 mm
7 mm	5 mm
8 mm	6 mm
10 mm	7 mm
12 mm	8 mm
14 mm	9 mm

Calculation base

- ETA-11/0190
- EN 1995-1-1:2010-12

NOTE: The value for shear capacity F_v can be multiplied by 1.25 if friction between the two components is to be estimated. In the case of connections using multiple screws, the effective number of screws n_{ef} per DIN EN 1995-1-1 (8.17) and/or ETA-11/0190 A.1.3.1 must be adhered to.

The exceptions listed in key chapter must be taken into consideration.

NOTE: These represent planning aids. The values are to be measured by authorized persons for a specific project.
